

Numerical Sequences test 50

Miguel Jorge Castro Pinho - 2013 ©

This test is intended to be an example related to teaching numerical ability, which is present in psychological tests, although difficult to match one. Thus is provided a set of 50 exercises for the examiner to solve and thus exercise your mind. Establishes a goal that is related to the improvement of cognitive skills.

The exercises are not arranged from easiest to hardest and the difficult is not nearly identical, with few exceptions.

Time is not limited in being your source of pleasure, but in order to be objective and provide a good intellectual stimulation.

Keep in perspective that some number sequences can be difficult, so be critical sense.
